

UI Automation Assessment Report

Project Information

Project Name: easemytrip

Participant: Jamesy Joseph

Date: 29.06.2026

Branch: Assessment2_jamesy29Jun2026_ease

Assessment: UI Automation using Selenium WebDriver

1. Objective & User Story

Objective

The objective of this automation project is to validate the flight search functionality of the application using Selenium WebDriver.

The automated test validates the complete user journey from searching for flights to viewing available flight options and verifying flight details such as airline name, departure time, arrival time, duration, and fare.

The framework is designed to be scalable, maintainable, and reusable using modern UI automation best practices and the Page Object Model (POM) design pattern.

User Story

As a user,

As a user, I want to search for flights and view the available options so that I can compare fares before booking.

2. Flow Under Test

Scenario 1: Flight Search and Flight Details Validation

1. Launch application.
2. Close popup if displayed.
3. Select One Way trip option.
4. Enter source city as Chennai.
5. Enter destination city as Bangalore.
6. Select tomorrow's travel date.

7. Click Search button.
8. Verify Search Results page loads successfully.
9. Capture all available flight cards displayed.
10. Dynamically select a flight from the available results.
11. Validate the following flight details:
 - Airline Name
 - Departure Time
 - Arrival Time
 - Duration
 - Fare
12. Print selected flight details.
13. Verify fare displayed is greater than zero.

4. Framework Design

The framework follows reusable Selenium automation design principles.

Folder Structure

src

test

java

com.selenium_ui

pages

BasePage.java

HomePage.java

SearchResultPage.java

components

FlightCard.java

support

Config.java

DriverFactory.java

tests

BaseUiTest.java

FlightSearchTest.java

pom.xml

Components

Tests

Contains all UI automation test scenarios.

File :FlightSearchTest

Pages

Contains Page Object classes representing application pages.

File: HomePage, SearchResultPage

Components

Contains reusable UI components shared across pages.

File: FlightCard

Support

Contains reusable framework utilities.

File : Config, DriverFactory

5. Test Scenarios Covered

Test Case ID -Description -Status

TC_UI_001 -Verify Flight Search Functionality - Passed

TC_UI_002 -Verify Search Results Page Loads Successfully -Passed

TC_UI_003 -Verify Flight Cards Are Displayed -Passed

TC_UI_004 -Verify Airline Details Are Displayed -Passed

TC_UI_005 -Verify Departure and Arrival Times -Passed

TC_UI_006 -Verify Flight Duration -Passed

TC_UI_007 -Verify Flight Fare Is Greater Than Zero -Passed

TC_UI_008 -Verify Dynamic Flight Selection -Passed

8. Results

Test 1: Flight Search

Successfully searched flights between Chennai and Bangalore.

Result: Passed

Test 2: Search Results Verification

Successfully verified that the search results page loaded and displayed available flights.

Result: Passed

Test 3: Flight Card Validation

Successfully captured available flight cards from search results.

Result: Passed

Test 4: Airline Information Validation

Successfully validated airline name for selected flight.

Result: Passed

Test 5: Departure and Arrival Time Validation

Successfully validated departure and arrival times.

Result: Passed

Test 6: Duration Validation

Successfully validated flight duration information.

Result: Passed

Test 7: Fare Validation

Successfully validated that the displayed fare is greater than zero.

Result: Passed

Test 8: Dynamic Flight Selection

Successfully selected a flight dynamically and extracted all required flight details.

Result: Passed

9. Conclusion

The Selenium UI automation framework successfully validates the flight search functionality of the application.

Key Achievements

Search results page validation implemented, Positive scenarios implemented, Page Object Model implemented, Reusable framework structure implemented, Explicit Wait strategy implemented, Centralized configuration implemented, Driver Factory pattern implemented, Clean and maintainable automation framework followed, UI automation best practices applied, Test execution completed successfully.
