

Selenium Automation Framework – Filter properties in Booking.com Test Report

1. Project Title

UI Automation Testing Framework using Selenium WebDriver – Filter properties validation.

2. Objective

The objective of this project is to design and implement a scalable UI automation framework using Selenium WebDriver, Java, JUnit 5, and Page Object Model (POM) to validate the filter properties functionality in Booking.com website.

Target Website

<https://www.booking.com/>

3. User Stories

User Story 1 – Filter By Price

As a customer

I want to search for a destination and check-in and check-out date

I need to filter the properties based on price range

So that I can see the properties of price mentioned.

Acceptance Criteria

- **User enters destination and check-in, check-out dates**
- **Search results are displayed**
- **Filter properties based on price range**
- **Properties displayed based on price range.**

Status: Not Executed

User Story 2 – Filter by property type

As a customer

I want to search for a destination and check-in and check-out date

I need to filter the properties based on property type

So that I can see the properties of selected types.

Acceptance Criteria

- **User enters destination and check-in, check-out dates**
- **Search results are displayed**
- **Filter properties based on property type**
- **Properties displayed based on type of property selected.**

Status: PASS

User Story 3 – Add Product to Cart

As a customer

I want to search for a destination and check-in and check-out date

I need to filter the properties based on Property rating

So that I can see the properties of rating selected.

Acceptance Criteria

- **User enters destination and check-in, check-out dates**
- **Search results are displayed**
- **Filter properties based on property rating**
- **Properties displayed based on property rating selected.**

Status: Not Executed

User Story 4 – Verify Quick View

As a customer

I want to search for a destination and check-in and check-out date

I need to filter the properties based on Free cancellation

So that I can see the properties having free cancellation.

Acceptance Criteria

- **User enters destination and check-in, check-out dates**
- **Search results are displayed**

- Filter properties based on free cancellation available
- Properties displayed based on free cancellation available

Status: Not Executed

4. Environment & Setup

Hardware

- System: Windows 11
- RAM: 8 GB
- Processor: Intel i5 or above

Software

Component	Version
Java	21+
Selenium WebDriver	Latest
JUnit 5	Latest
Maven	Latest
Chrome	Latest
ChromeDriver	Compatible Version
IntelliJ IDEA	Latest

5. Framework Design

Framework Architecture

Test Layer

↓

Page Object Layer

↓

Base Page

Selenium WebDriver

Base Page

Responsible for

- Click
- Type
- Wait
- Visibility
- Element Actions
- Common Selenium utilities

File

BasePage.java

Page Layer

Responsible for

- Encapsulating page locators
- Business operations
- Page navigation

Files

HomePage.java

SearchResultsPage.java

Test Layer

Responsible for

- Test execution
- Assertions

Files

BaseTest.java

6. Project Structure

7. Test Scenarios Covered

Scenario 1 – Filter by price range

Input

Price range : 1000 - 5000

Expected

- **Matching products displayed**

Status

Not Executed

Scenario 2 – Filter by property type

Input:

Property type: Hotels

Expected

- **Matching products displayed**

Status

Pass

Scenario 3 – Filter by rating

Input

Rating: 4 stars

Expected

- **Matching products displayed**

Status

Not Executed

Scenario 4 – Filter by free cancellation

Expected

- **Matching products displayed**

Status

Not Executed

8. Execution Steps

Compile Project

mvn clean compile

Run Tests

mvn clean test

9. Test Results

Execution Summary

Total Tests : 1

Passed : 1

Failed : 0

Skipped : 0

Execution Time

24 Seconds

Browser

Chrome

Environment

Windows 11

Overall Result

PASS

10. Evidence

11. Conclusion

The Selenium Automation Framework was successfully developed using Java, Selenium WebDriver, JUnit 5, and the Page Object Model (POM) to automate the Validation filtering properties.
