

API Automation Assessment Report

Project Name: Api Testing

Participant: Tetali Hemanth Venkata Reddy

Date: 29-06-2026

Git Repo Url : [ust-sdet-training/SDET: Repository for SDET training batch](#)

Branch name : hemanth-qa-gate2

Assessment: API Automation using Rest Assured

1. Objective & User Story

Objective

Develop an automated API test using Rest Assured to create a new post through the JSON Placeholder API and validate that the API returns the expected response with the correct status code and response body.

User Story

As a QA Engineer, I want to create a new post using the JSON Placeholder API and verify that the response contains the expected data, so that I can ensure the POST endpoint is functioning correctly and returns the appropriate response upon successful resource creation.

2. Flow Under Test

Scenario :

1. Create a new post and verify the API response.

3. Environment & Setup

Application Details

Item - Value

Application URL - Configured through .env

Framework - Rest Assured

Language - Java 22

Build Tool - Maven

Test Runner - JUnit 5

Schema Validation - JSON Schema Validator

OS - Windows 11

Environment Variables

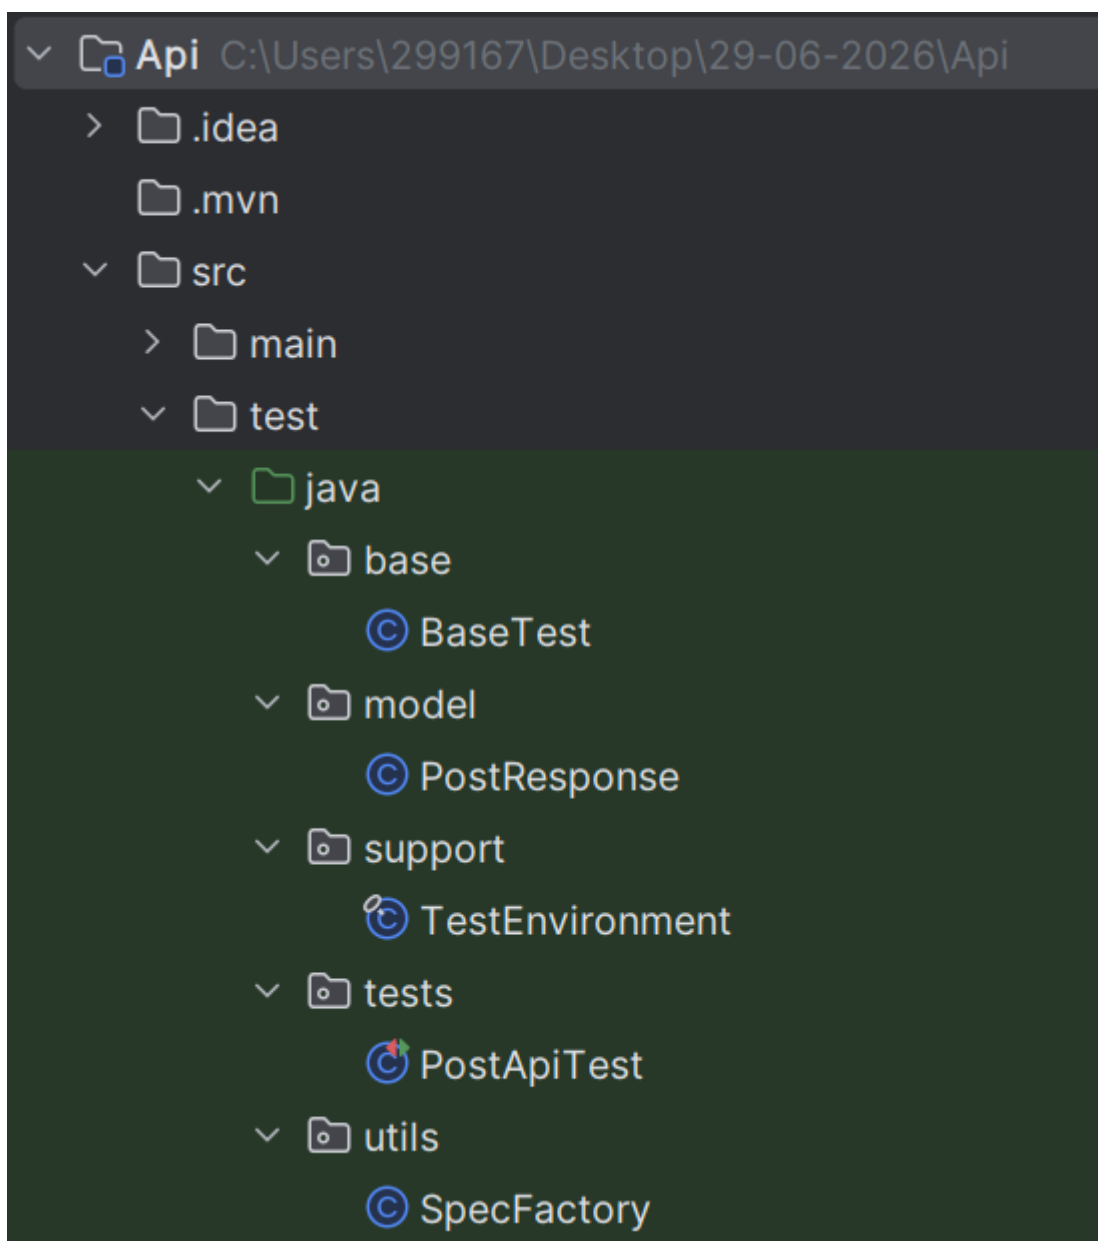

Stored in: .env file

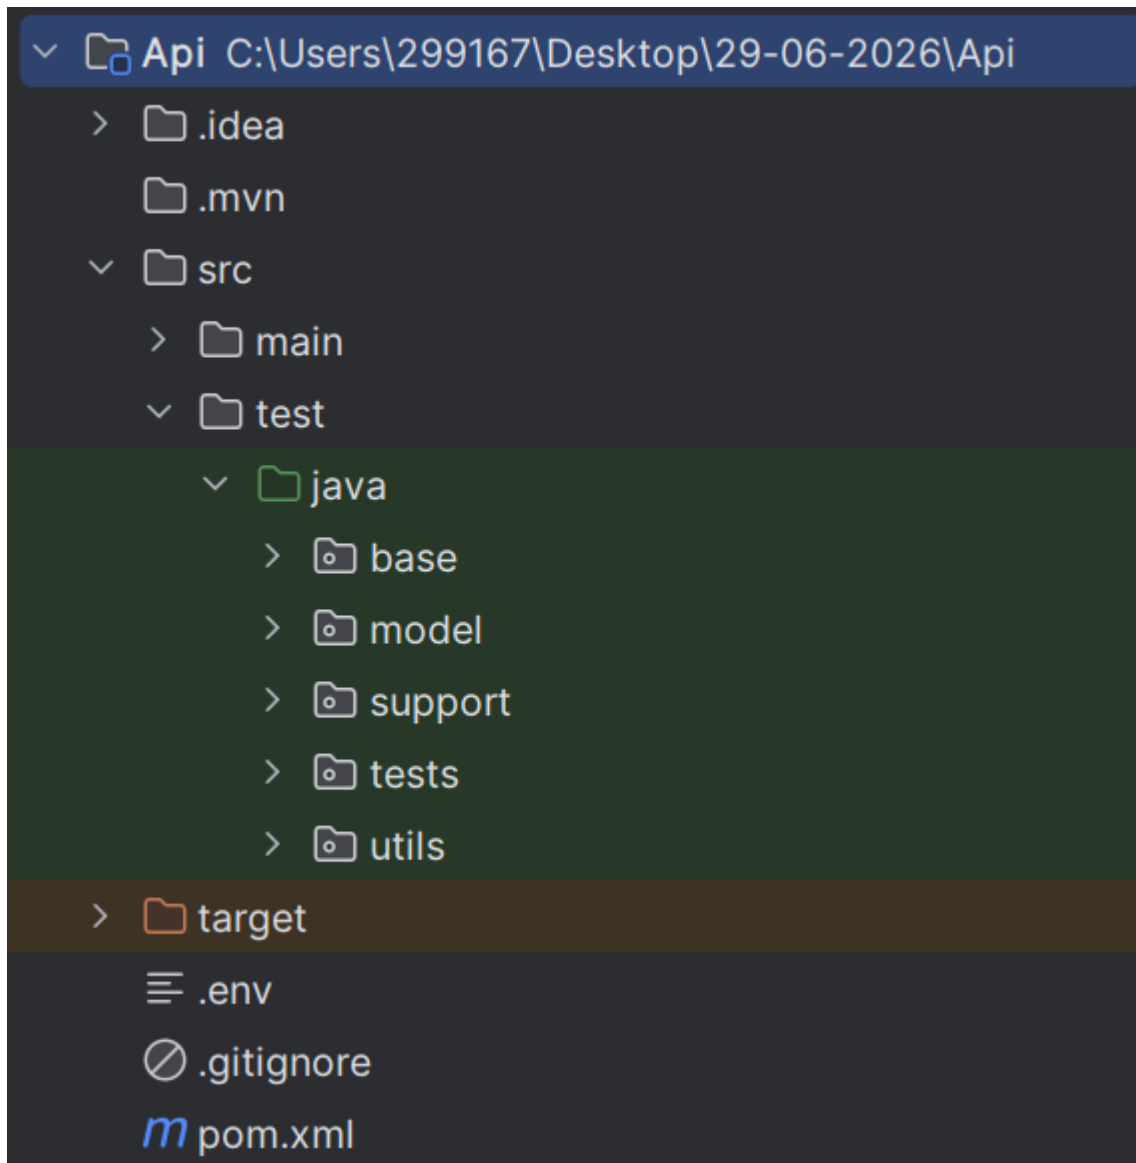

BASE_URL=https://jsonplaceholder.typicode.com

Execution Command

mvn clean test

4. Framework Design

I kept Base url in the .env file and then called to Test Environment from the Test Environment I called to BaseTest.

Then I extended Api test to BaseTest .

5. Test Scenario Covered

As a QA Engineer, I want to create a new post and verify the response.

Base URL: <https://jsonplaceholder.typicode.com>

Flow

1. Send a POST request to: **/posts**

2. Request Body:

```
{  
  "title": "Automation Testing",  
  "body": "Rest Assured Assignment",  
  "userId": 1  
}
```

3. Validate:

- a. Status Code = 201
- b. Response contains:
 - a. title
 - b. body
 - c. userId
 - d. id

Expectations

- a. POST request
- b. Request body creation
- c. Response validation
- d. Assertions

6. Automation Best Practices Used

- Rest Assured Framework
- JUnit 5
- Request Specification Pattern
- Response Specification Pattern
- Environment Variables (.env)
- JSON Schema Validation
- Reusable Test Utilities
- Token-Based Authentication
- Centralized Configuration
- Assertions for Status Codes
- Assertions for Business Data
- Clean and Maintainable Framework Structure
- Reusable Payload Models
- Maven Dependency Management

7. Execution Result

```
✓ ApiTest (tests) 2 sec 627 ms ✓ 1 test passed 1 test total, 2 sec 627 ms
  ✓ createNewPr 2 sec 627 ms
    "C:\Program Files\OpenLogic\jre-22.0.2.9-hotspot\bin\java.exe" ...

    Process finished with exit code 0
```

```

8. Conclusion

The Rest Assured API automation framework successfully validates the critical functionality of the application APIs.
