

Selenium Automation Project Documentation

1.User Story

As a traveller, I want to proceed with booking by providing valid contact details so that I can continue the booking process securely.

2. Technologies Used

Java

Selenium WebDriver

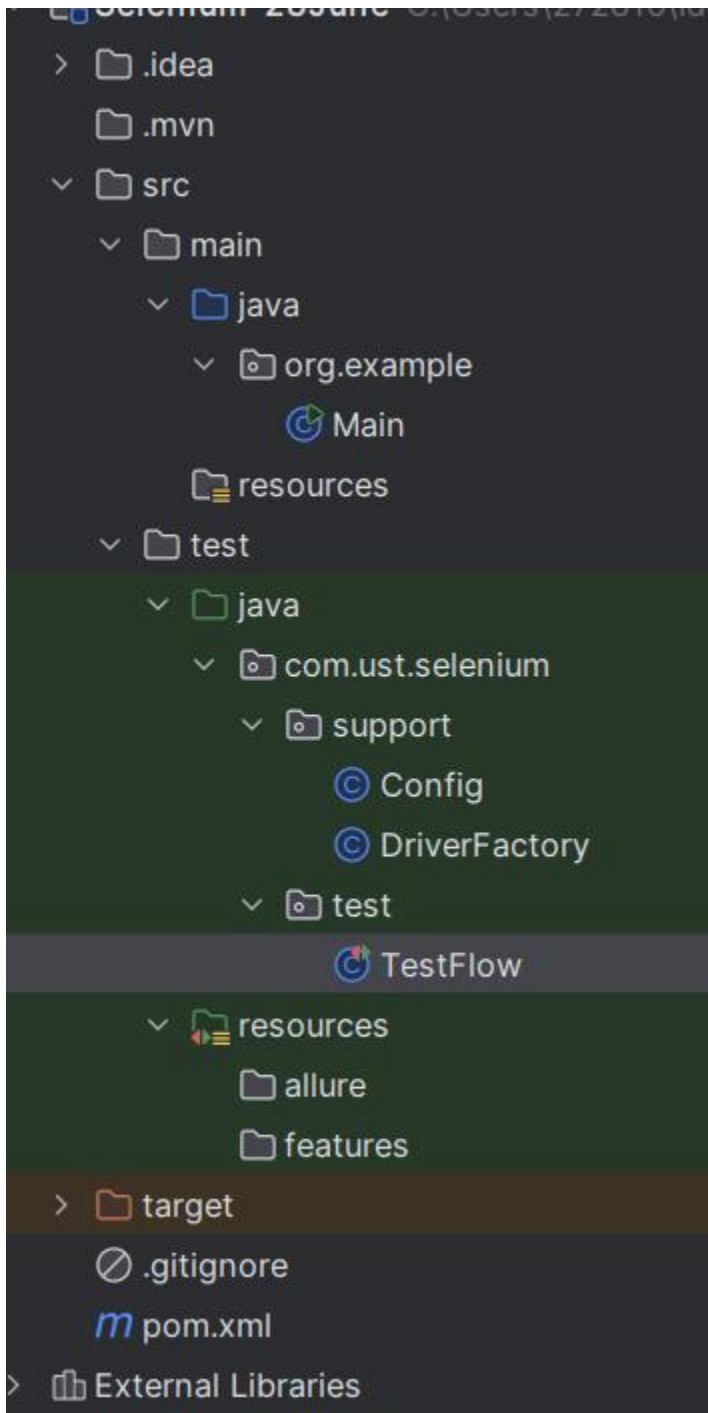

JUnit 5

Maven

ChromeDriver

IntelliJ IDEA

3. Project Structure

4. Purpose of Config.java

Stores application URL and configuration values in one place.

5. Purpose of DriverFactory.java

Creates and manages browser drivers so that browser setup code is reusable.

6. Purpose of TestFlow.java

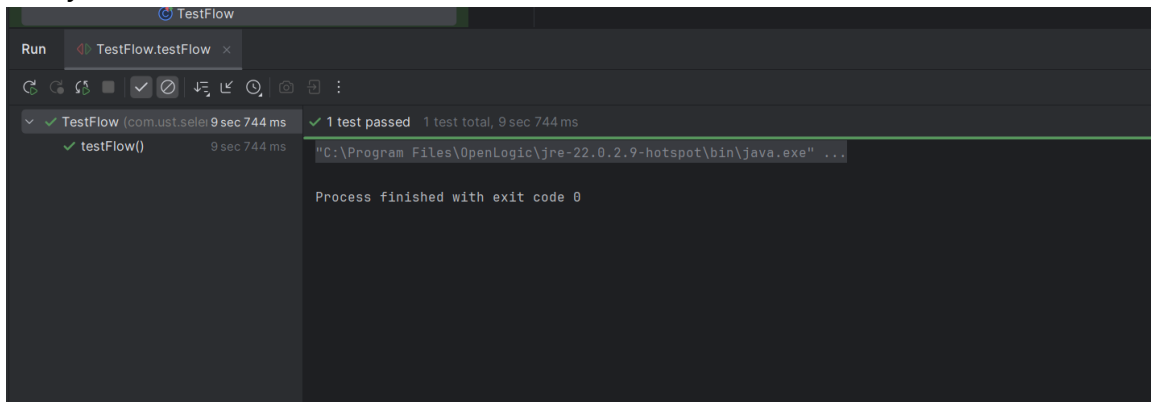

Automates the complete bus search process by entering source, destination, and clicking the search button.

7. Why We Use WebDriverWait

It waits for elements to become visible or clickable and avoids failures.

8. Testing Flow

Open Browser → Open Website → Enter Source → Enter Destination → Click Search → Verify Results → Close Browser

9. Conclusion

This framework is simple, reusable, and easy to maintain. It helps reduce manual testing effort.
