

API Testing Interim Assessment – George Bibu

Scenario: As an authenticated user, I want to update a booking and verify the updated details.

API URLs

Operation	Method	URL
Generate Token	POST	https://restful-booker.herokuapp.com/auth
Create Booking	POST	https://restful-booker.herokuapp.com/booking

Test Case:

Created a test case using RestAssured to create two POST requests. The first request is a POST request sent to <https://restful-booker.herokuapp.com/auth>. The baseUri is set to <https://restful-booker.herokuapp.com> and content type is set to JSON. Username and password are passed in the body as a JSON. A successful response generates a status code of 200 along with a token in the response body.

The second POST request is sent to <https://restful-booker.herokuapp.com/booking>. baseUri is set to <https://restful-booker.herokuapp.com> and content type is set to JSON. In the request body, details such as first name, last name, price, etc. are passed as a JSON. A successful request returns a status code of 200 and the details of the newly created booking in the response body along with a unique booking id.

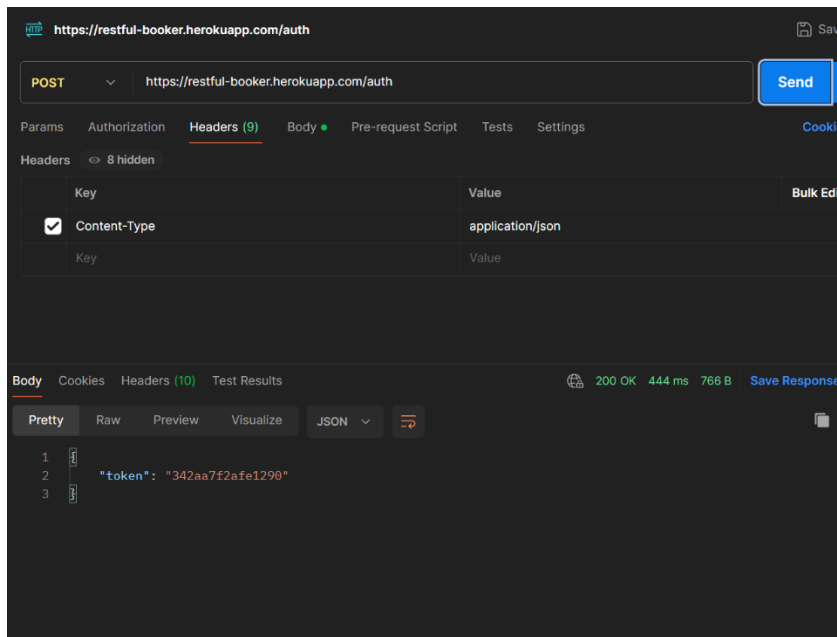

1) Create Token:

<https://restful-booker.herokuapp.com/auth> - POST

Request body:

```
{  
  "username": "admin",  
  "password": "password123"  
}
```

Generates a status code of 200 and a token in the response body upon a successful request.

2) Create booking:

<https://restful-booker.herokuapp.com/booking> - POST

Headers

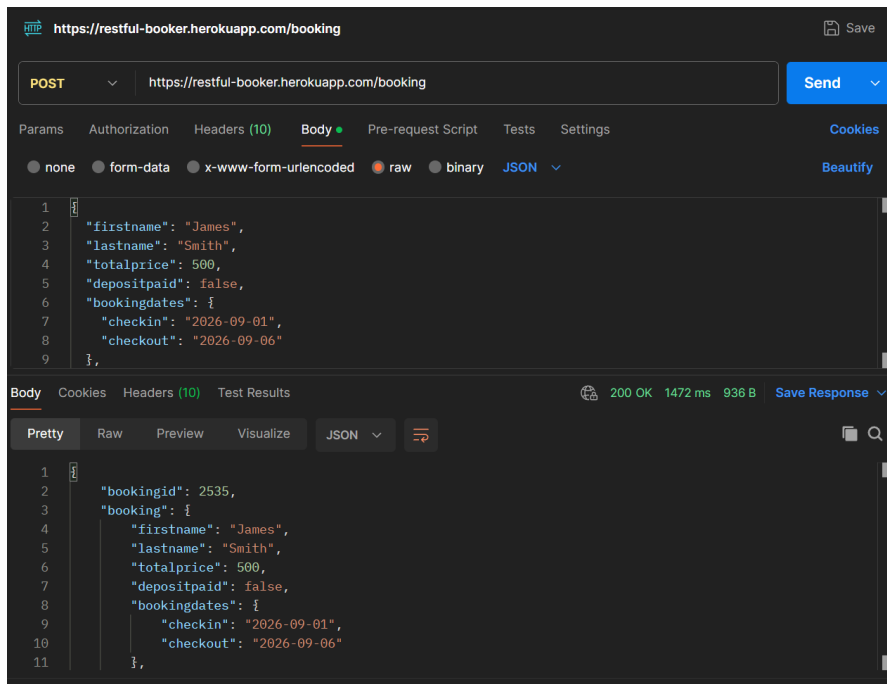

Content-Type: application/json

Request

```
{
  "firstname": "James",
  "lastname": "Smith",
  "totalprice": 500,
  "depositpaid": false,
  "bookingdates": {
    "checkin": "2026-09-01",
    "checkout": "2026-09-06"
  },
  "additionalneeds": "Lunch"
}
```

Generates a status code of 200 and response body:

```
{
  "bookingid": 4942,
  "booking": {
    "firstname": "Jim",
    "lastname": "Brown",
    "totalprice": 111,
    "depositpaid": true,
    "bookingdates": {
      "checkin": "2018-01-01",
      "checkout": "2019-01-01"
    },
    "additionalneeds": "Breakfast"
  }
}
```
