

Selenium Interim Assessment – George Bibu

Scenario: As a user, I want to search hotels and apply filters so that I can find suitable accommodation using <https://easemytrip.com>

Flow: Navigate to <https://www.easemytrip.com>

- * Click Hotels.
- * Search → Dubai.
- * Select future Check-in & Check-out dates.
- * Select:
 - * 2 Adults
 - * 1 Room
- * Click Search.
- * Verify hotel results page loads.
- * Capture hotel list.
- * Apply 4-Star filter.
- * Select any hotel dynamically.
- * Validate:
 - * Hotel name
 - * Price
 - * Star rating
 - * Hotel location
- * Print selected hotel details.

Test case: Created a test case called EaseMyTripTest.java which contains 3 tests. Before each test a chrome driver is created with the url <https://easemytrip.com>

The driver is closed after each test.

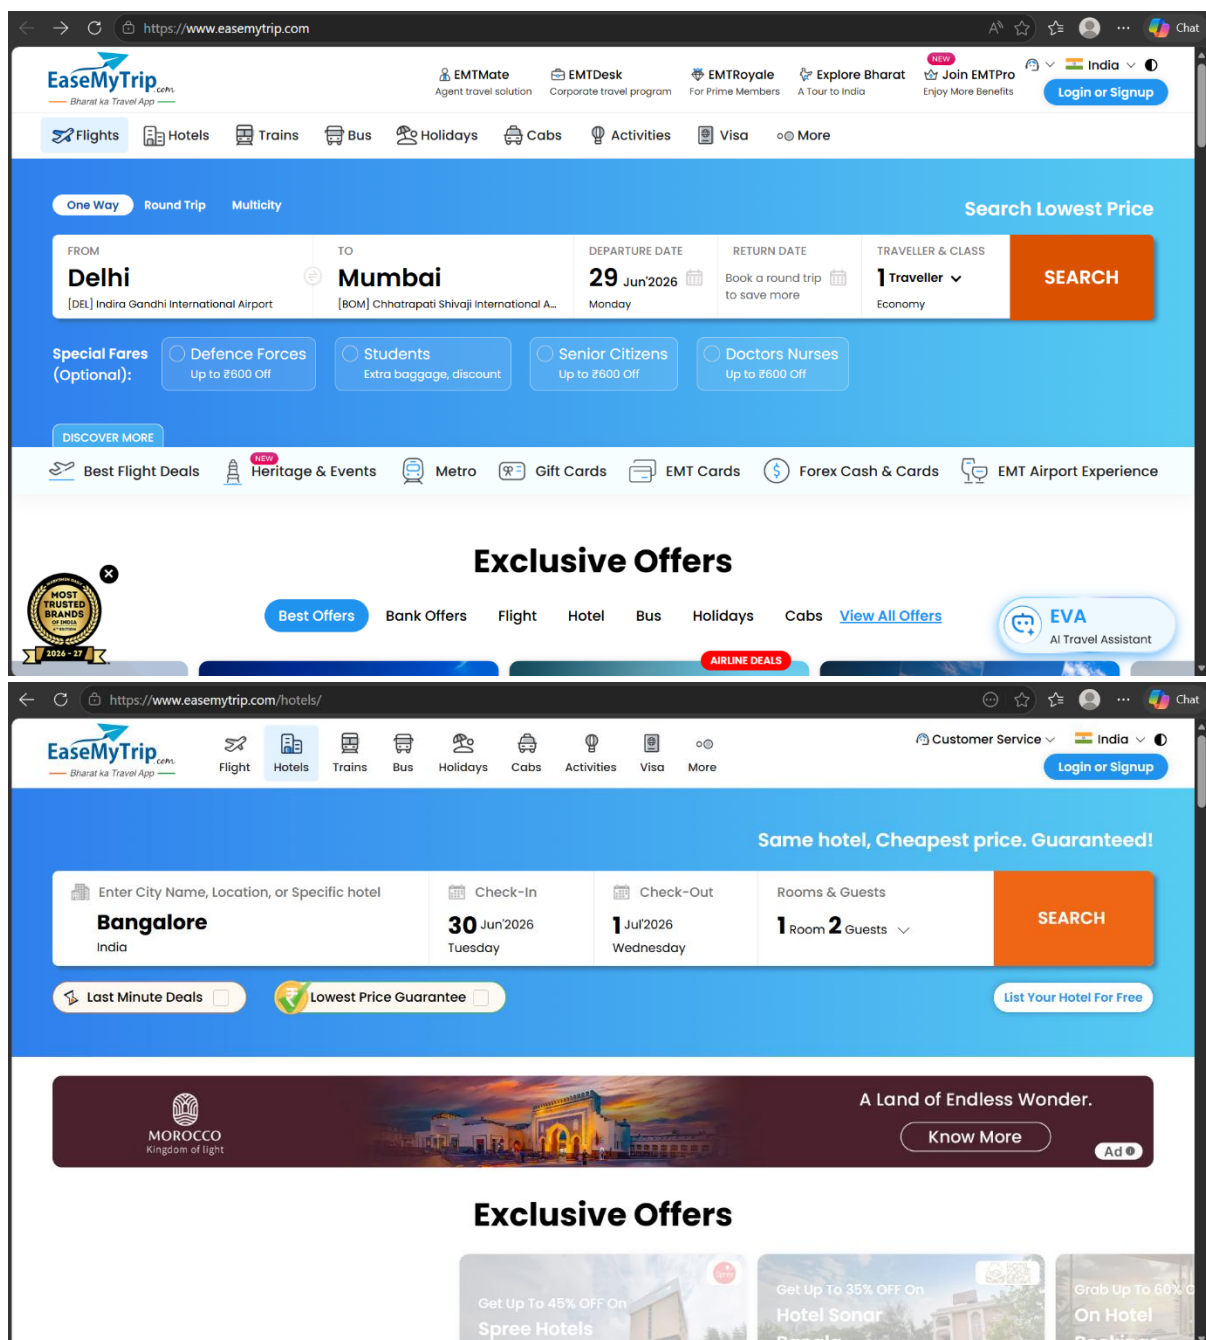

In the first test, we verify that the main page (<https://easemytrip.com>) is loading by using the assertEquals assertion.

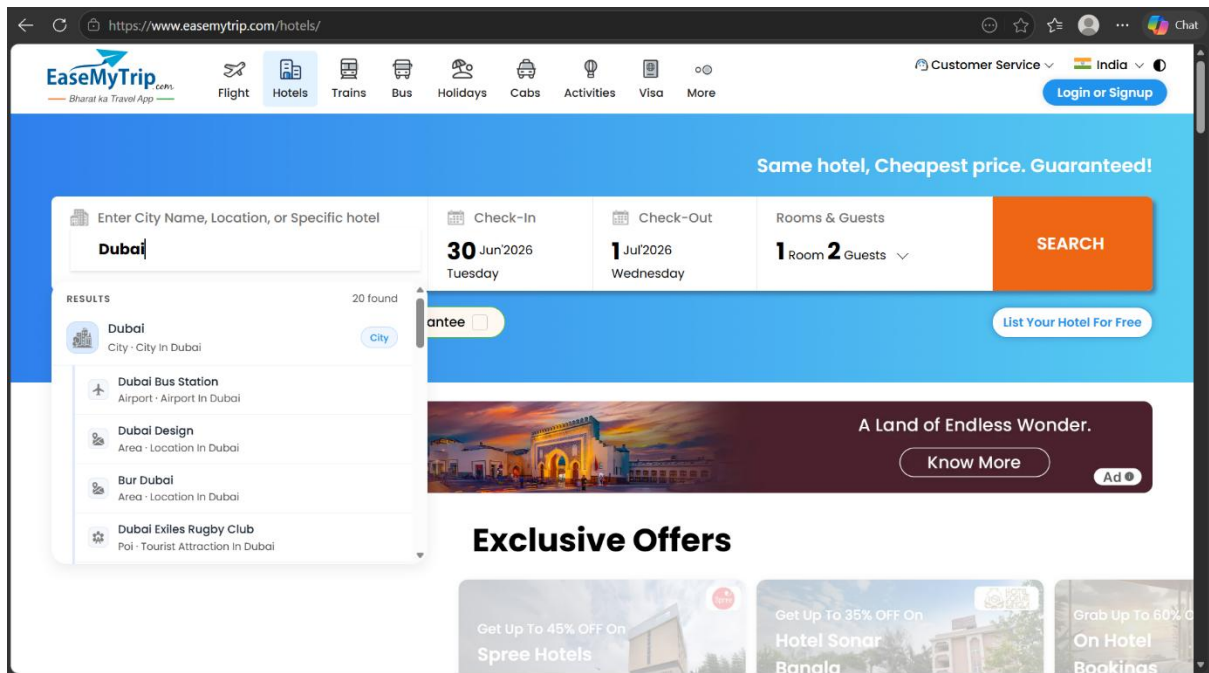

In the second test, we verify that the “Hotels” button on main page is visible and we click the button to move to the Hotels page.

In the third test, we set search parameters and search for hotels matching those parameters. First, we click on the “Hotels” button to navigate to the Hotels page. Then, we click on the “Location” field and type “Dubai” in the input box. After this, we click on the “Search” button to search for hotels matching the parameters.

File path: SDET\Selenium\src\test\java\com\ust\sdet\EaseMyTripTest.java

Commands: mvn clean test -Dtest=EaseMyTripTest

```
