

Rest Assure APi Test Report

Project Information

Emp Id - 299167

Name: Tetali Hemanth Venkata Reddy

Date: 25-06-2026

Assessment: Rest Assure Api Automation

Git Hub : [ust-sdet-training/SDET: Repository for SDET training batch](https://github.com/ust-sdet-training/SDET: Repository for SDET training batch)

Created a branch hemanth_25Jun26

You can find the code in the following git repo.

1.User Story

The User story is there are some api provided in the website we need to write tests for the api request and response.

2. Scenariious

Scenario – 1 :

1. Performing CRUD operations in the pet Api.

Scenario – 2 :

1. Finding pet by status.
2. We can find the pets weather they are available or pending or sold by giving the option it will display the pets based on the status.

Scenario – 3 :

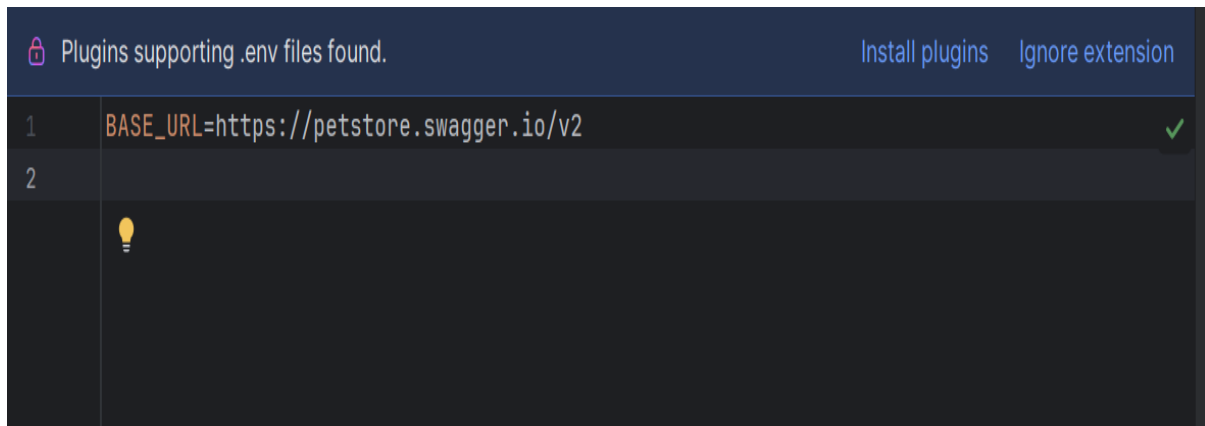

1. The third Scenario is to place the order.
2. After placing the order we need to get the details of the order by using order id.

Scenario – 4:

1. The Fourth Scenario is to creating the user.
2. And also updating the user After Creating.

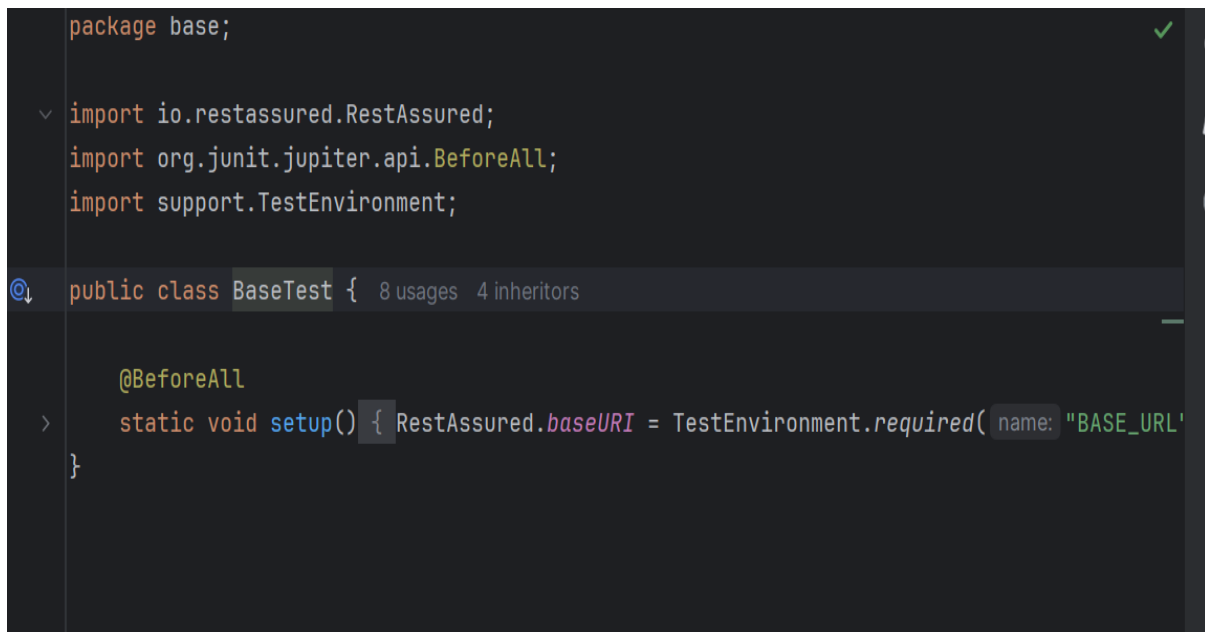

3.setup

I have created .env file which contains only base url as mentioned in the below Screenshot.

Then I called .env file to the Test Environment

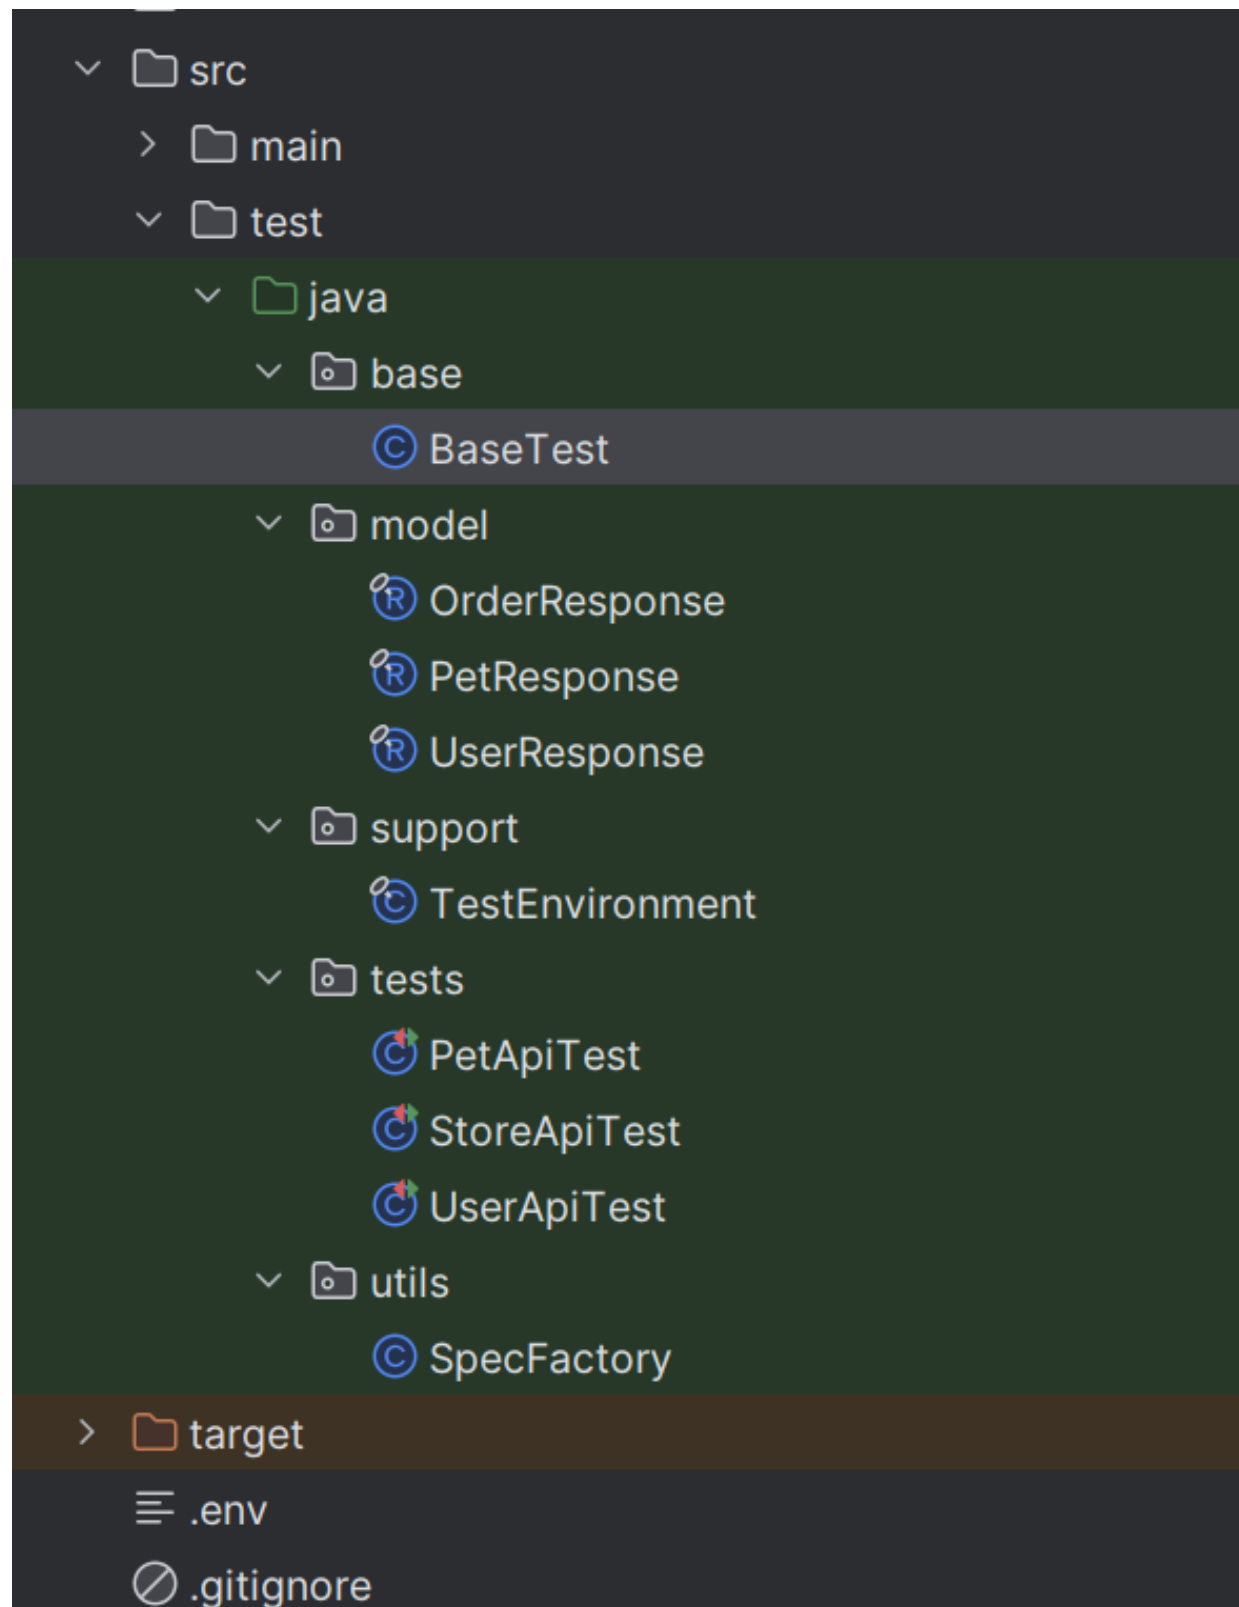

The test Environment will be called by BaseTest.java it contains @Beforeall which will execute before every test the following is the code for BaseTest.java

4.Frameworks

In this I have created many files and followed the Frameworks in the good and structured way in which I can make files reusable.

The below was the screen shot of the structure I followed in the following project.

I created models for user,pet,user Responses.

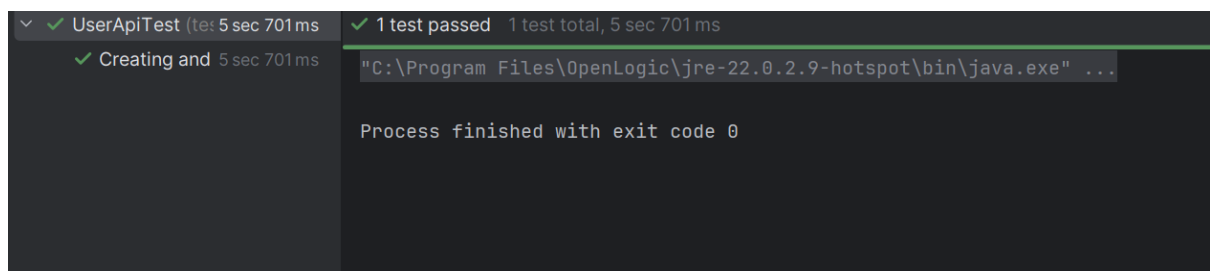

I created SpecFactory which contains all request and response specifications so that I can use that in every test file by importing.

5.Test Cases

Test case_id	scenario	result
TC_1	Performing crud operations in the Pet Api.	Passed
TC_2	Finding Pet by the status.	Passed
TC_3	Place the order and get the order by id.	Passed
TC_4	Creating and Updating the User.	Passed

The Screen shots for the Successfully passed the tests

UserApiTest

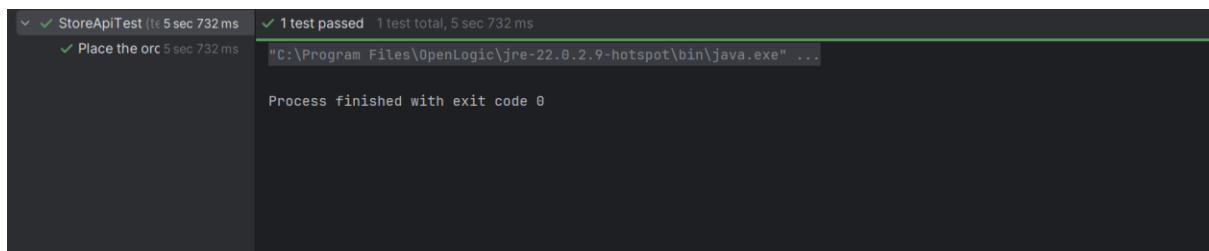

```
✓ UserApiTest (tes: 5 sec 701 ms) ✓ 1 test passed 1 test total, 5 sec 701 ms
  ✓ Creating and 5 sec 701 ms "C:\Program Files\OpenLogic\jre-22.0.2.9-hotspot\bin\java.exe" ...
  Process finished with exit code 0
```

PetApiTest

StoreApiTest

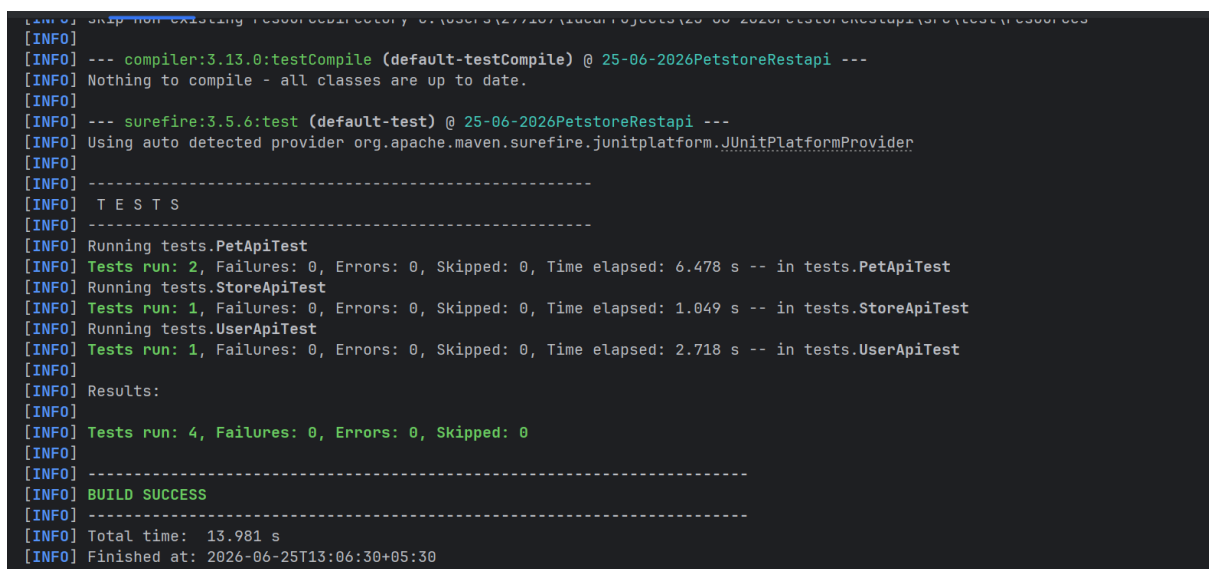

To run all the test at one time we need to use the following command

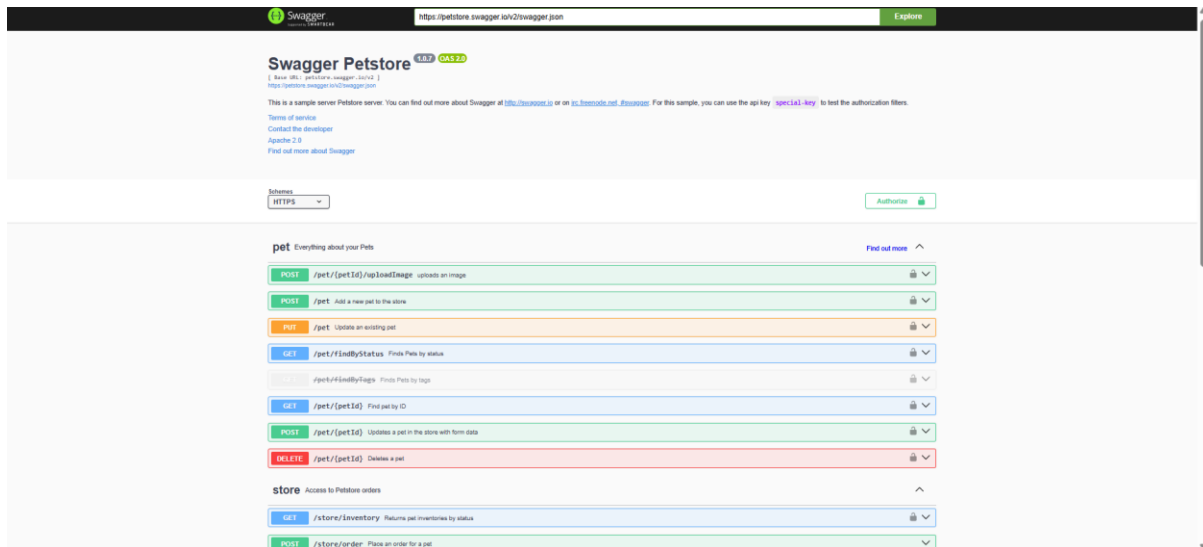

`mvn test`

This command will run all the tests

The Screenshot for all test cases running is

The following was the Screenshot of the website we tested

Conclusion :

The above was the some of the test cases I have done today in api testing.
