

Playwright Automation Test Report

Project Information

Project Name: Nykaa

Participant: Jamesy Joseph

Date: 24/06/2026

Branch: Jamesy-24-06-2026

Assessment: Playwright UI Automation

1. Objective & User Story

Objective

The objective of this automation project is to validate the core functionality of the site using Playwright.

The automated test suite validates key user workflows and ensures the site works as expected in supported browser (Chrome). It helps run tests consistently and makes it easier to maintain and expand the test coverage.

User Story

As a user, I want to perform the application workflow successfully so that I can complete my task without errors and receive the expected results from the system.

2. Flow Under Test

Scenario 1: Verify Home Page

1. Open the site (Launch to landing page).
2. Navigate to the Home Page.
3. Verify page title ("*Buy Cosmetics Products & Beauty Products Online in India at Best Price | Nykaa*").
4. Verify page URL ("*https://www.nykaa.com/*").

Scenario 2: Verify Valid Search

1. Open the site.
2. Enter valid search keyword(valid Product Name).
3. Click Search (or click "Enter" button in keyboard).
4. Verify search results are displayed along with keyword.

5. Verify searched product is present in results.

Scenario 3: Verify Invalid Search

1. Open the site.
 2. Enter invalid search keyword.
 3. Click Search (or click "Enter" button in keyboard).
 4. Verify "No Results Found" message is displayed.
-

3. Environment & Setup

Application Details

Items – Value

Application URL - <https://www.nykaa.com/>

Framework – Playwright

Language – TypeScript

Design – POM (Page Object Model)

Runner Test – Playwright Test

Browser – Chromium

OS – Windows 11

Playwright Configuration

```
use: {  
  baseURL: "https://www.nykaa.com/",  
  headless: false,  
  screenshot: "only-on-failure",  
  trace: "on-first-retry"  
},
```

Browser Configuration

```
projects: [  
  {  
    name: "chromium",
```

```
    use: {  
      ...devices["Desktop Chrome"]  
    }  
  }  
}
```

Execution Command:

```
npx playwright test
```

4. Framework Design

The automation framework follows the POM design pattern.

Folder Structure

QA Test Playwright:

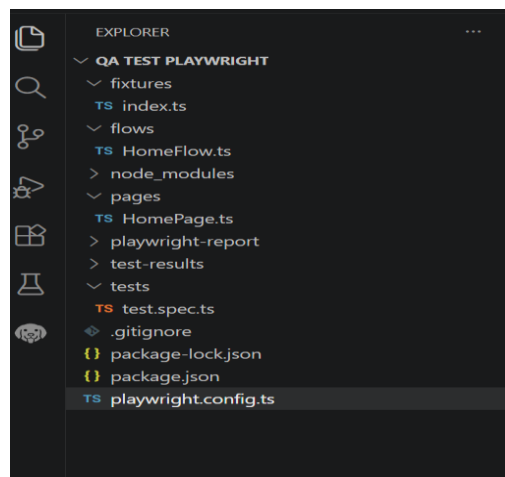

tests – [test.spec.ts]

pages – [HomePage.ts]

flows – [HomeFlow.ts]

fixtures – [index.ts]

playwright.config.ts

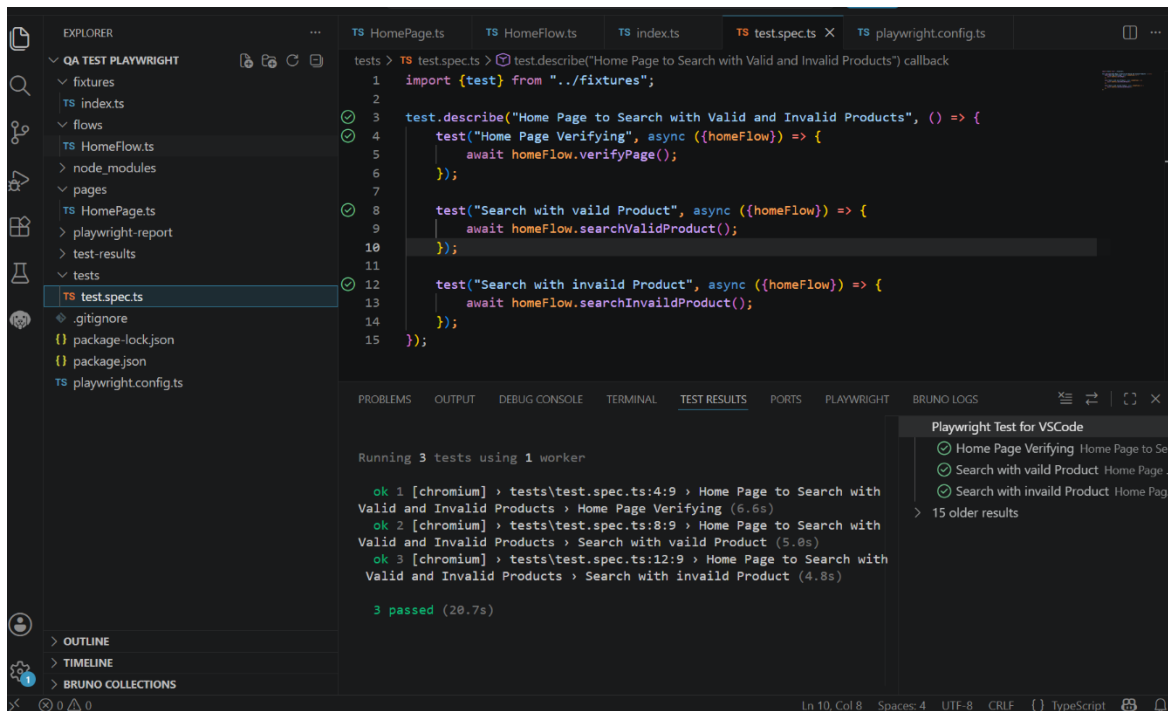

Components

Tests

Contains all test specification files. But for this scenario only one file is included.

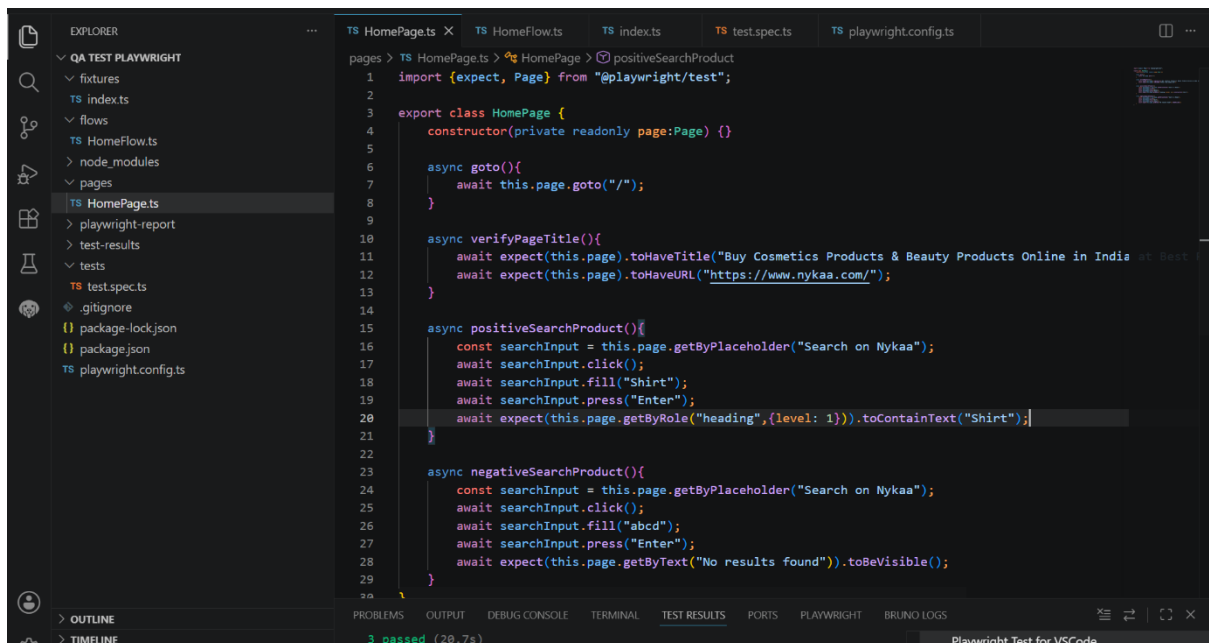

File : test.spec.ts

Pages

Contains Page Object classes. Page locators, Page actions, Reusable methods these are used in the page file.

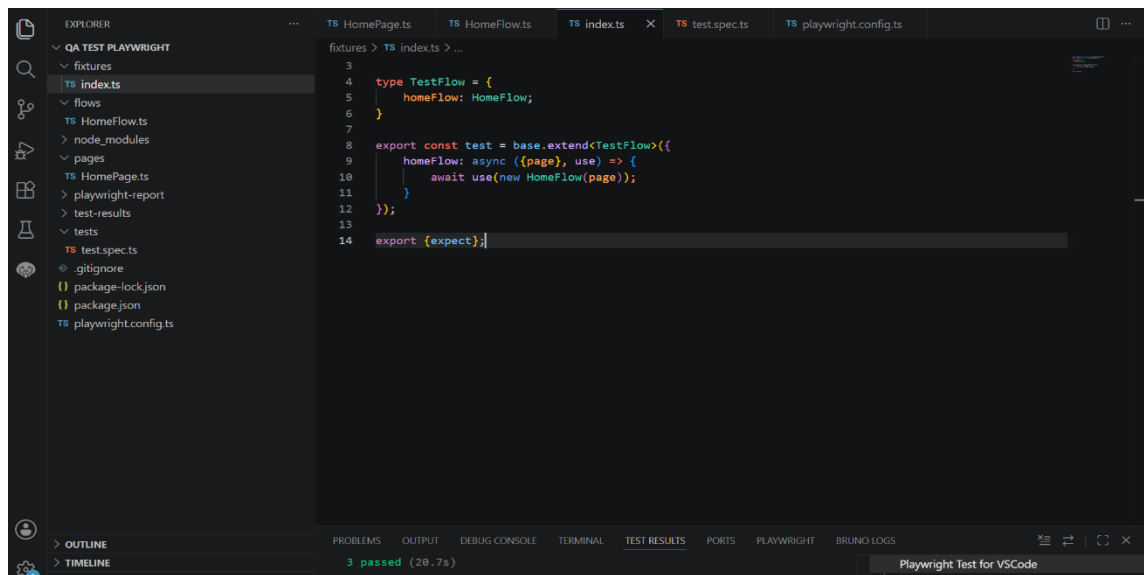

File : HomePage.ts

Fixtures

Contains test setup and dependency injection.

File: index.ts

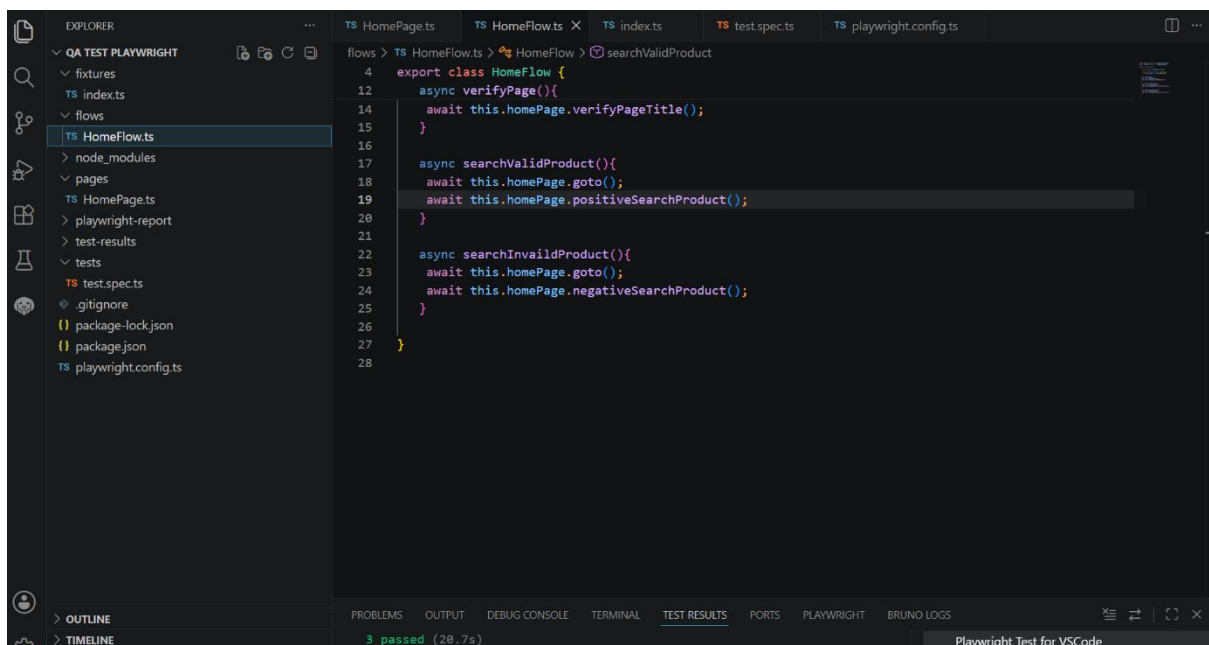

```
3 fixtures > TS index.ts > ...
4
5 type TestFlow = {
6   homeFlow: HomeFlow;
7 }
8
9 export const test = base.extend<TestFlow>({
10   homeFlow: async ({page}, use) => {
11     await use(new HomeFlow(page));
12   }
13 });
14 export {expect};
```

Flows

Contains page methods and the flow needs for the scenario for the test cases.

File : HomeFlow.ts

```
flows > TS HomeFlow.ts > % HomeFlow > searchValidProduct
4 export class HomeFlow {
12   async verifyPage(){
14     await this.homePage.verifyPageTitle();
15   }
16
17   async searchValidProduct(){
18     await this.homePage.goto();
19     await this.homePage.positiveSearchProduct();
20   }
21
22   async searchInvalldProduct(){
23     await this.homePage.goto();
24     await this.homePage.negativeSearchProduct();
25   }
26 }
27
28
```

5. Test Scenarios Covered

Test Case ID – Description – Status

Positive Scenarios

TC_001 - Verify Home Page – Passed

TC_002 - Verify Valid Product Search – Passed

TC_003 - Verify Search Result – Passed

Negative Scenarios

TC_004 - Verify Invalid Product Search – Passed

TC_005 - Verify "No Results Found" message displayed – Passed

6. Automation Best Practices Used

- One Positive and Negative UI Scenarios Tested
- Navigation used by appropriate function goto()
- Page Object Model (POM)
- Async/Await
- click(), fill()- perform actions are used
- Reusable fixtures, flows are used
- Playwright assertions
- Centralized configuration
- Simple, Clean, Readable code are properly structured

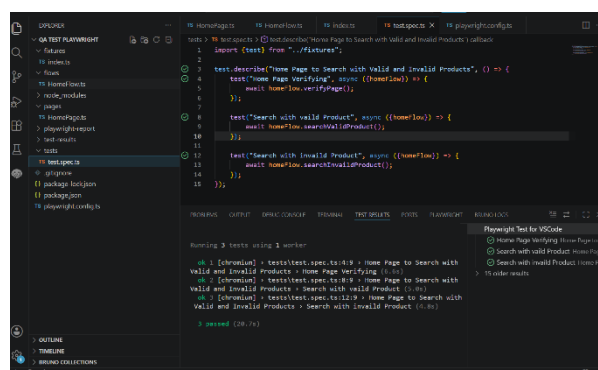

7. Execution Result

Metric – Value

Total Tests – 3

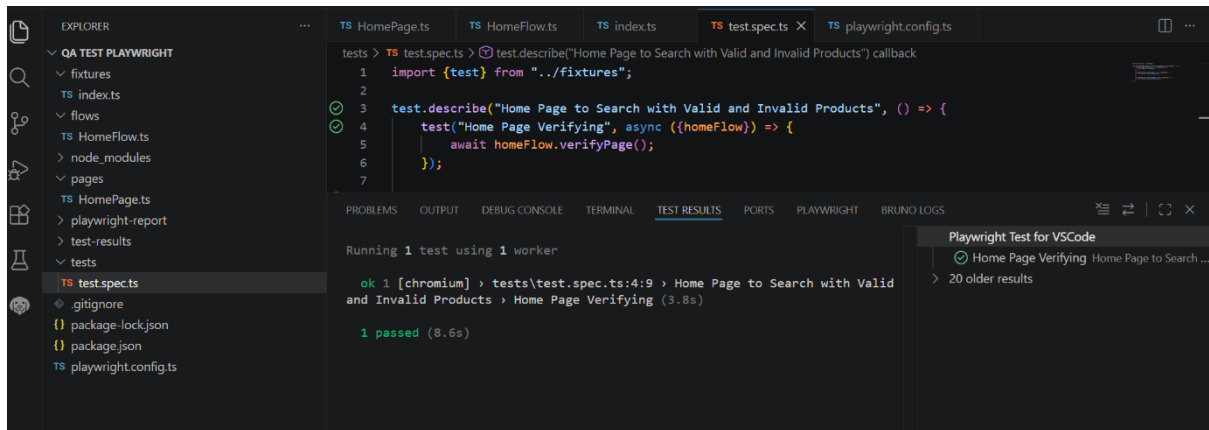

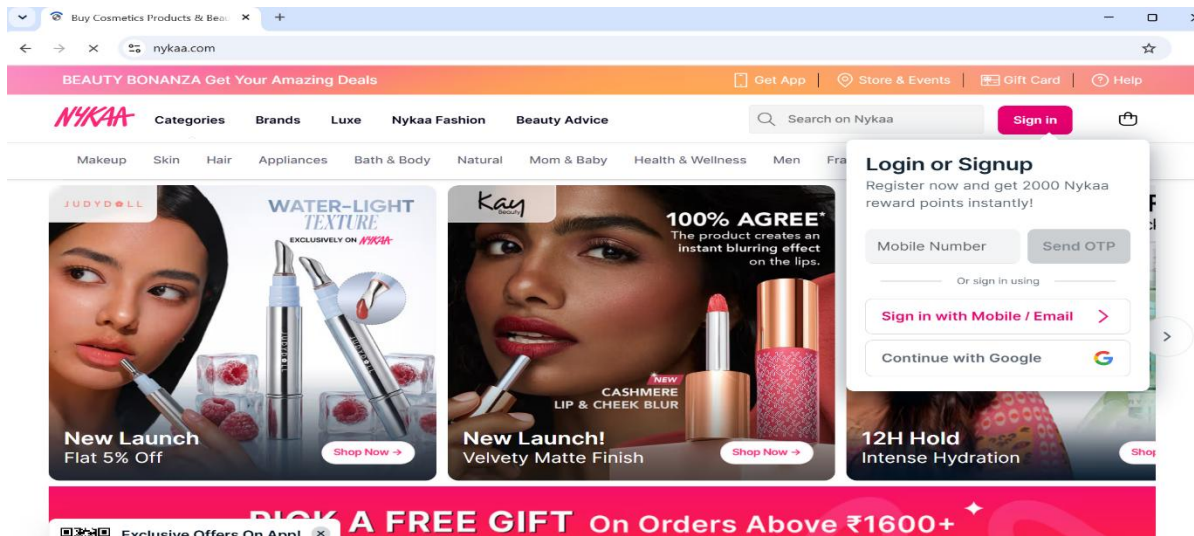

Passed – 3

Failed – 3

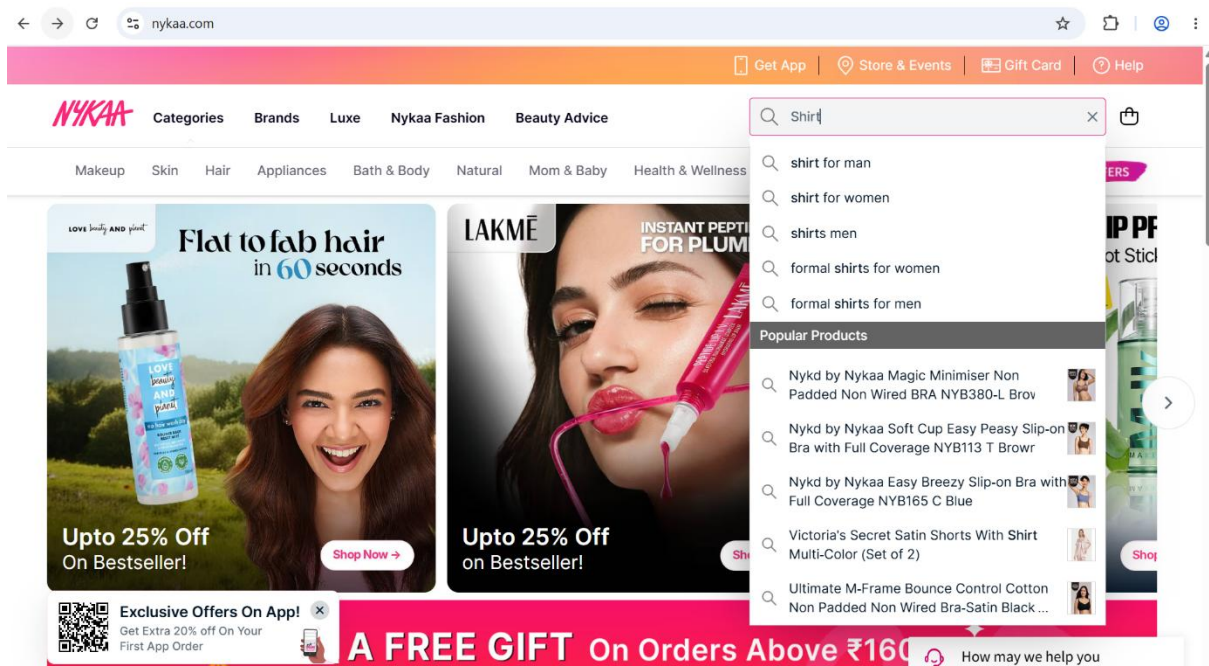

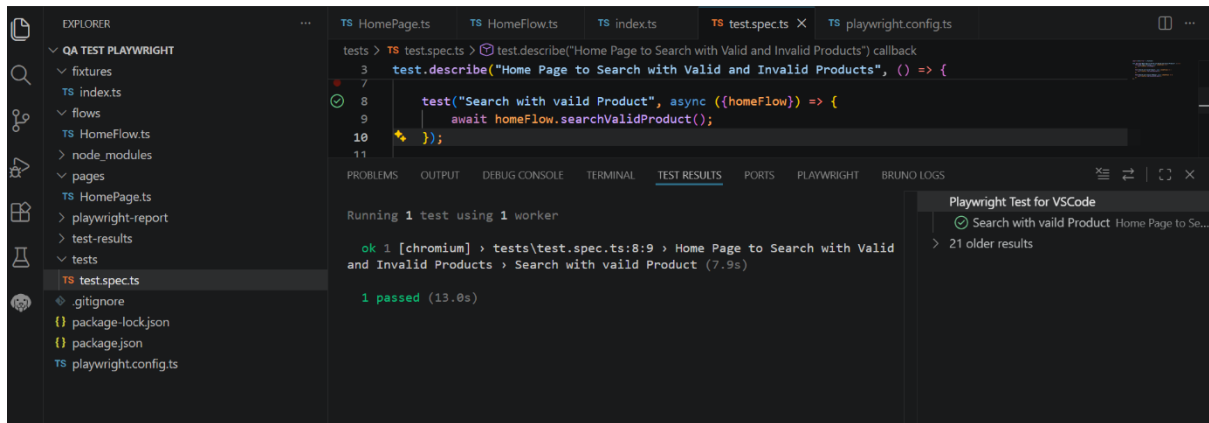

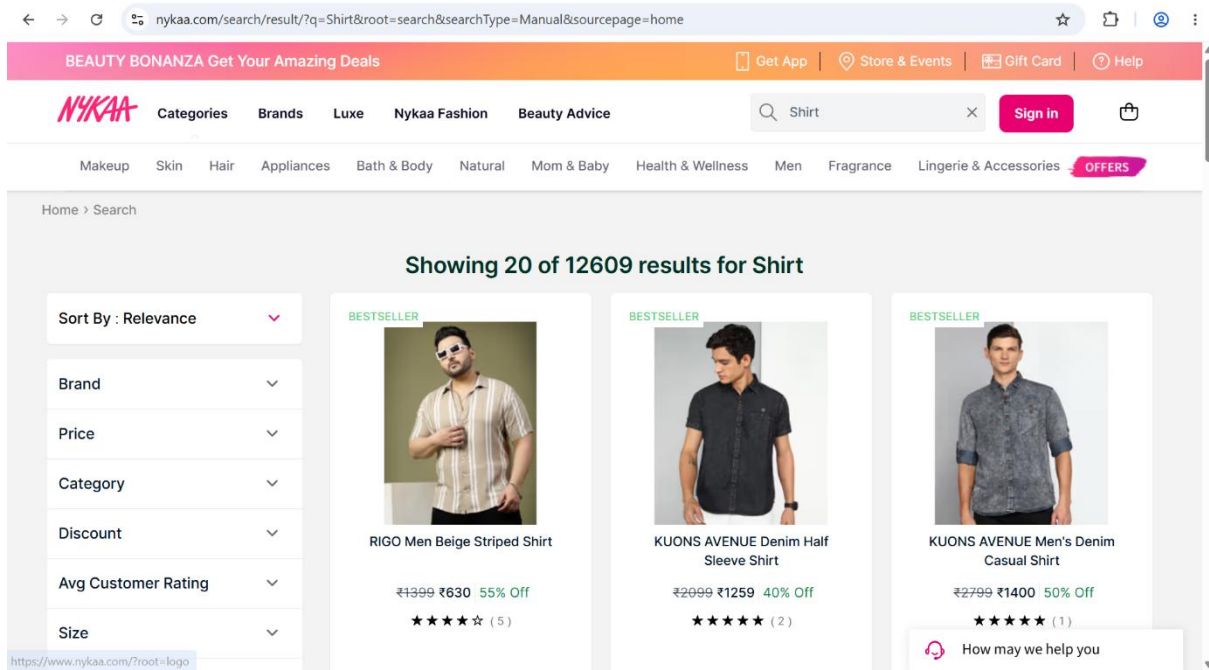

8. Results

Test 1: Home Page

Test 2: Valid Product Search

Test 3: Invalid Product Search

The image displays two screenshots. The top screenshot shows the Nykaa website's search results for the query 'abcd'. The search bar at the top right contains 'abcd', and a dropdown menu lists suggestions: 'abc drink', 'abc juice powder', 'abc powder', 'redken abc leave in treatment', and 'abcefg13426'. Below the search bar, the website features several promotional banners, including 'Aqua Marine Makeup', 'Eucerin 97% spot reduction success', and 'New Launch! Cashmere Lip & Cheek Blur'. A banner at the bottom of the website states 'A FREE GIFT On Orders Above ₹1600'. The bottom screenshot shows the same search results page, but with the text 'No results found for 'abcd'. Showing most relevant results.' displayed prominently. Below this message, three product cards are shown: 'Hydra Glow Skincare Natural Face Serum Hydrating &...', 'Drape In Vogue Boho Relaxed Fit Shirt Abd Shorts', and 'Ozone Signature ABC Serum'. The bottom screenshot also includes a VS Code window showing a Playwright test script for the search functionality, which is currently passing.

Search Results for 'abcd':

- abc drink
- abc juice powder
- abc powder
- redken abc leave in treatment
- abcefg13426

Product Cards:

- Hydra Glow Skincare Natural Face Serum Hydrating &...**
₹299 ₹194 35% Off
Enjoy Complimentary Gift
★★★★★ (29)
- Drape In Vogue Boho Relaxed Fit Shirt Abd Shorts**
₹2399 ₹1199 50% Off
- Ozone Signature ABC Serum**
Out Of Stock
₹4799 ₹1349 25% Off
★★★★★ (91)

Playwright Test Script:

```

test.describe("Home Page to Search with Valid and Invalid Products") {
  test("Search with invalid Product", async ({homeFlow}) => {
    await homeFlow.searchInvalidProduct();
  });
}

```

Test Results:

Running 1 test using 1 worker

ok 1 [chromium] › tests\test.spec.ts:12:9 › Home Page to Search with Valid and Invalid Products › Search with invalid Product (5.7s)

1 passed (10.1s)

8. Conclusion

The Playwright automation framework successfully validates the critical user workflows of the site.

- One Positive and Negative UI Scenarios Implemented.
- Home page validation completed.
- Search functionality validated.
- POM implemented.
- Async/Await implemented.
- `click()`, `fill()`- perform actions are used in the implementation.
- For navigation appropriate function `goto()` is implemented.
- Reusable fixtures, flows are implemented.
- Playwright best practices followed.
- Test execution completed successfully.
